

Workshop Programme

Environmental monitoring of biocides in Europe - from prioritisation to measurements

November 5-6, 2012 in Berlin

The European Biocidal Product Directive 98/8/EC (BPD) on placing biocidal products on the market was adopted in 1998 and subsequently transposed into national law by the EU member states. It will be replaced by EU regulation No 528/2012 which will be applied from September 1, 2013. A number of biocidal active substances is already authorised under the BPD (positive list in Annex I/Ia), but many of the substances are still under assessment (biocide review programme). The implementation of the BPD already caused a change in the use of biocidal active substances in Europe. A number of substances has been withdrawn from the market, or will be withdrawn soon as a consequence of non-inclusion decisions. Additionally, the use of certain biocidal substances will be restricted by risk mitigation schemes.

Environmental monitoring can help in assessing whether the implementation of the BPD has positive effects on the environmental quality (Are lower concentrations detected in recent years?), whether there is a risk (Are the measured environmental concentrations below the derived PNEC?), and whether the exposure estimations applied for risk assessment are realistic (Are the modelling results consistent with the monitoring data?).

This international workshop will be held jointly by the German Federal Environment Agency (Umweltbundesamt) and NORMAN, a network of reference laboratories and research centres for monitoring emerging environmental pollutants (<http://www.norman-network.net>). The workshop should be a platform to exchange existing information and data on exposure pathways for biocides, prioritisation of biocides for a monitoring, on practical issues regarding sampling and analysis, and on monitoring data handling and evaluation. The number of workshop participants from European countries is limited to 60 persons.
