## Proficiency Test 3/19

- TW S1 – sweeteners and benzotriazoles in  
drinking water -

acesulfam, cyclamate, saccharin, sucralose, 1H-benzotriazole,  
4-methyl-1H-benzotriazole, 5-methylbenzotriazole,  
sum of methyl-1H-benzotriazoles

## Final report

## 1. General

This PT was provided by AQS Baden-Württemberg in cooperation with IWW Water Center in Mülheim an der Ruhr and with the network “NORMAN” (Network of reference laboratories for monitoring of emerging environmental pollutants). In this round following parameters were to be determined:

- acesulfam
- cyclamate
- saccharin
- sucralose
- 1H-benzotriazole
- 4-methyl-1H-benzotriazole
- 5-methyl-1H-benzotriazole

The PT was executed and evaluated according to the requirements of DIN 38402-A45 and ISO/TS 20612.

## 2. PT design

Each participant received the following samples:

- 3 samples for the determination of acesulfam, cyclamate, saccharin, sucralose, 1-H-benzotriazole, 4-methyl-1H-benzotriazole, 5-methyl-1H-benzotriazole in 1000-ml glass bottles with ground glass plug. Preservation by adding 40 mg/l sodium azide. The samples also contained acetonitrile as solubility promoter.

3 different concentration levels/batches were produced. All participants received the same samples.

## 3. Sample preparation

The samples for the determination of the sweeteners and benzotriazoles were based on a real ground water matrix from the northern part of the region Ruhr in North Rhine-Westphalia. The ground water was used without treatment for the sample preparation.

The ground water was spiked with stock solutions and the concentrations covered drinking and ground water relevant ranges.

## 4. Sample distribution

The samples were dispatched on 09 April 2019 by express service

## 5. Analytical methods

The participants were free to choose a suitable method, but following limits of quantification were required:

parameter	limit of quantification [ $\mu\text{g/l}$ ]
acesulfam	0,05 $\mu\text{g/l}$ *
cyclamate	0,05 $\mu\text{g/l}$ *
saccharin	0,05 $\mu\text{g/l}$ *
sucralose	0,1 $\mu\text{g/l}$
1H-benzotriazole	0,05 $\mu\text{g/l}$
4-methyl-1H-benzotriazol	0,05 $\mu\text{g/l}$
5-methyl-1H-benzotriazol	0,05 $\mu\text{g/l}$

\*concentration refers to the acid and not to the salt of the respective substance

The participants were informed that the samples had to be analysed in the own laboratory, with own personal and own equipment. Subcontracting of the analysis was not allowed.

The samples had to be analysed in duplicate over the complete method (sample preparation and measurement). The participants were asked to report the results in  $\mu\text{g/l}$  with three significant digits.

## 6. Submission of the results

The deadline for the submission of results was on 29 April 2019.

## 7. Basic principle of evaluation and assessment

The basic principle of the evaluation and assessment of the PTs from AQS Baden-Württemberg are described in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

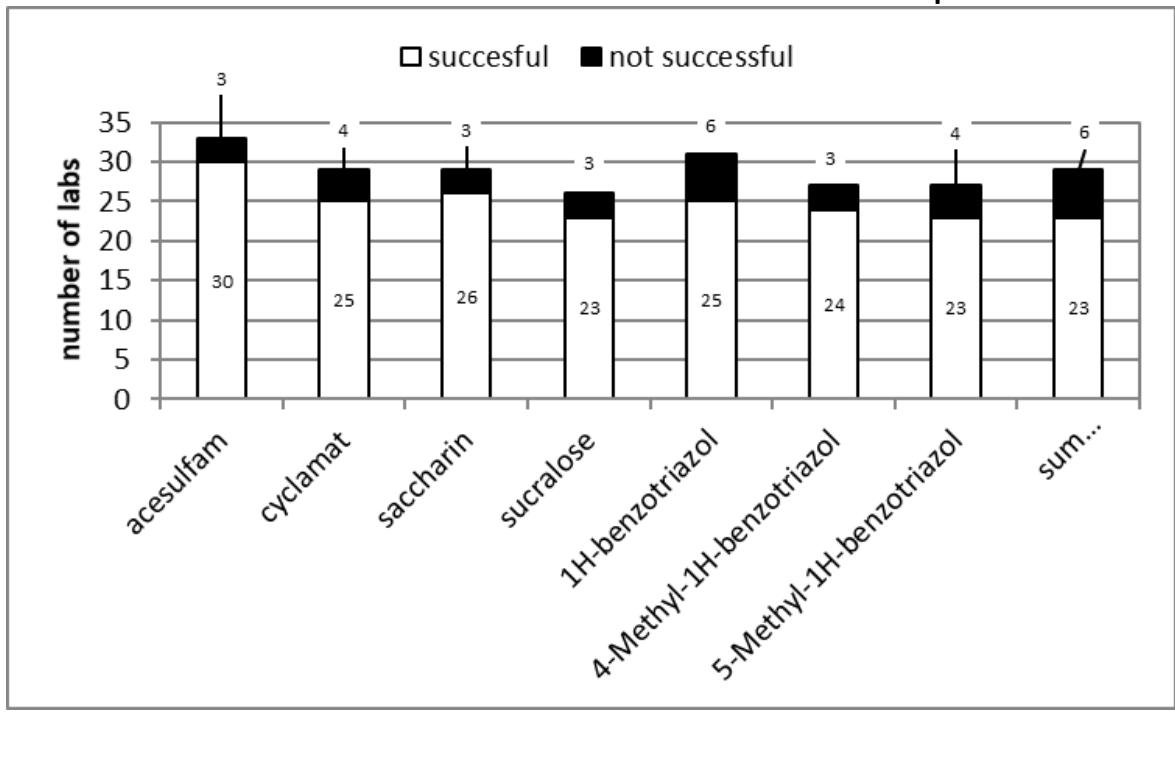

This PT was evaluated as follows:

<b>Assigned value <math>x_{pt}</math>:</b>	Reference value
<b>Standard deviation for proficiency assessment <math>\sigma_{pt}</math>:</b>	Q method
<b>Upper limit of <math>\sigma_{pt}</math>:</b>	25 %
<b>Lower limit of <math>\sigma_{pt}</math>:</b>	5 %
<b>Assessment:</b>	$z_u$ -Score
<b>Classification of the single results:</b>	$ z_u  \leq 2,0$ successful $2,0 <  z_u  < 3,0$ questionable $ z_u  \geq 3,0$ unsatisfactory
<b>Parameter assessment:</b>	A parameter was assessed as successful, if more than half of the values were correctly determined (2 out of 3 values are within the tolerance limits).

## 8. Evaluation

<b>Number of participants:</b>	36 1 laboratory did not report any results
<b>Number of reported values</b>	693
<b>Number of accepted values:</b>	587 (84,7%)

### Illustration of the successful and not successful laboratories for each parameter

## 9. Explanation for the appendices

The explanations for the appendices can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

## 10. Measurement uncertainty

### General:

Number of labs with valid values	35
Number of labs with valid values and reported measurement uncertainties	15 (42,9%)
Number of valid values	693
Number of valid values with measurement uncertainties	294 (42,2%)

### **Measurement uncertainties against the accreditation status**

Accreditation status of the values	Number of values	Number of values with measurement uncertainty
accredited	501	288 (57,5%)
not accredited	60	0 (0%)
not specified	132	6 (4,5%)

### **Interpretation of the reported measurement uncertainties:**

If measurement uncertainties are underestimated values assessed as “satisfactory” in the PT ( $|z_u| \leq 2$ ), will have a large  $\zeta$ -score.  $|\zeta| > 2$  means that the “own” requirements (defined in terms of estimated uncertainty) are not fulfilled.

<b>Number of values with reported measurement uncertainty having a <math> z_u  \leq 2,0</math></b>	250
<b>Number of values with a magnitude of <math>\zeta</math>-scores <math>&gt; 2</math></b> The own requirements of the laboratory are not fulfilled and the estimation of the measurement uncertainty is too low	39 (15,6%)

## **11. Traceable reference values**

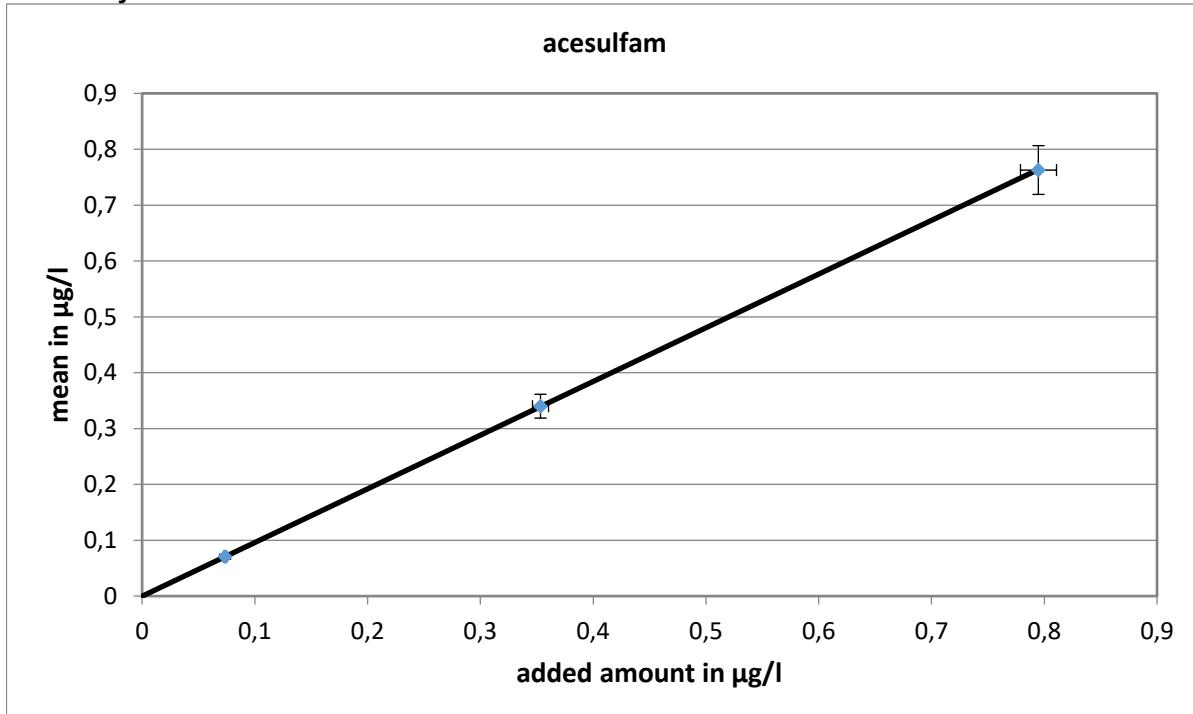

The explanations about traceable reference values can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf)

## **12. Internet**

The report is available on the following webpage: <http://www.aqsbw.de/pdf/report319.pdf>

								sum	78	5	6	14,1	

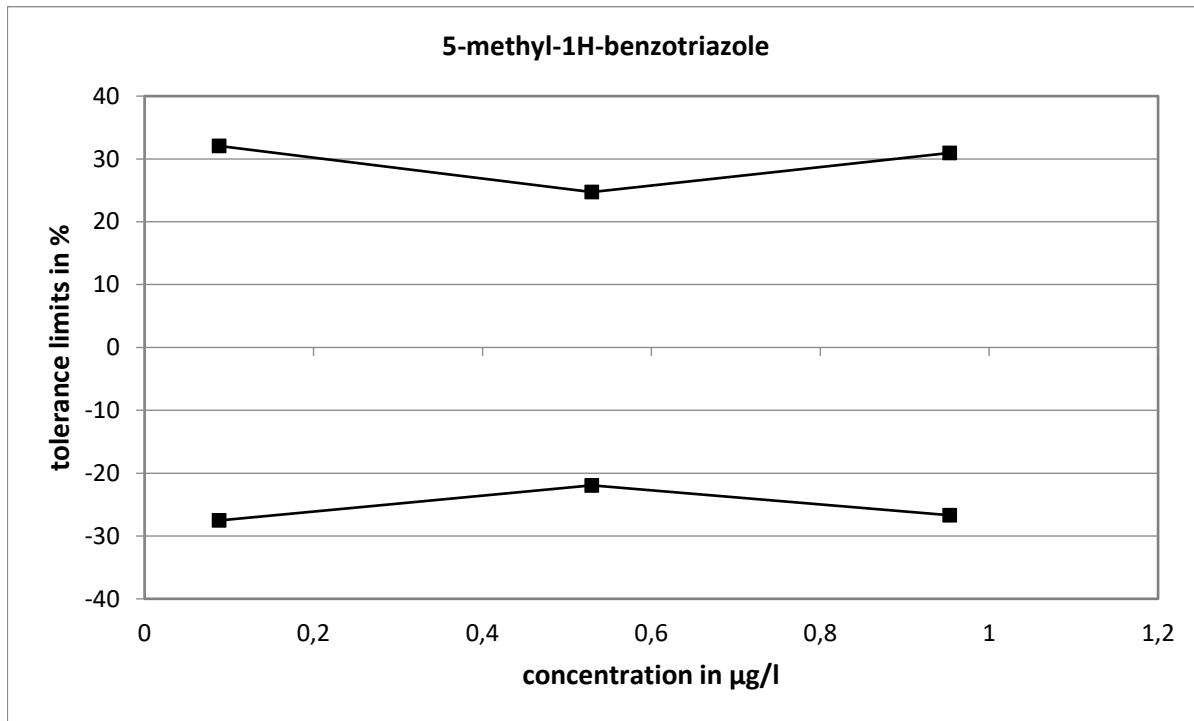

**Recovery**

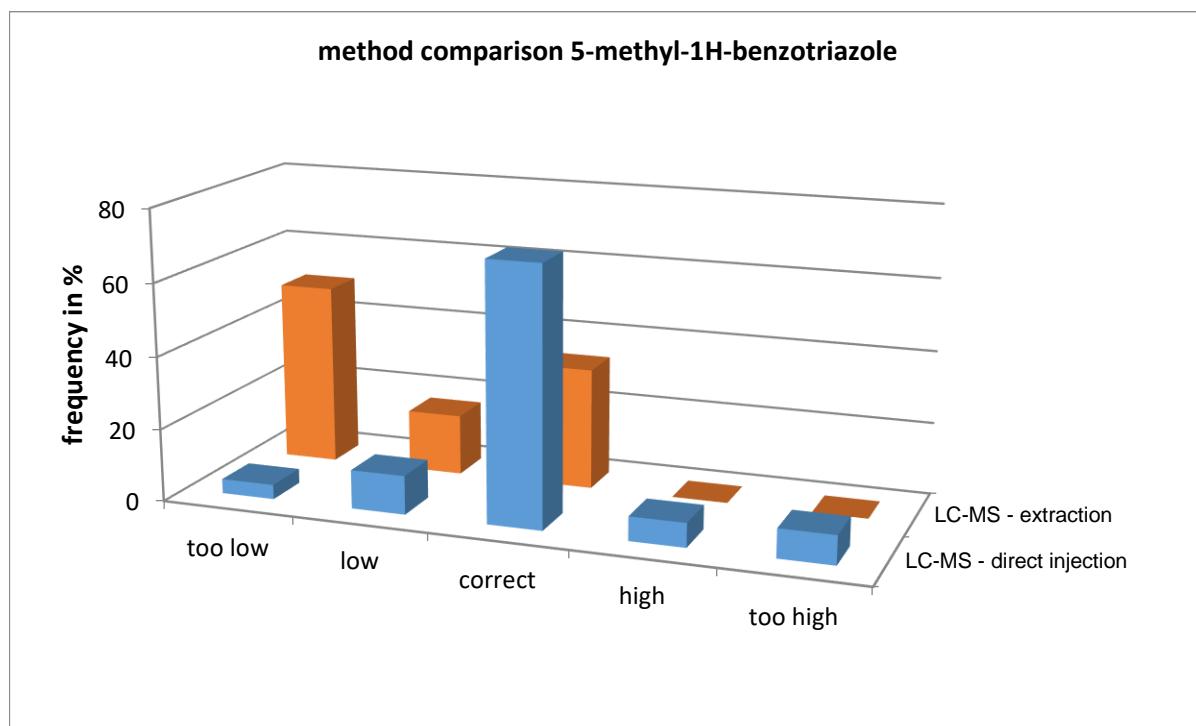

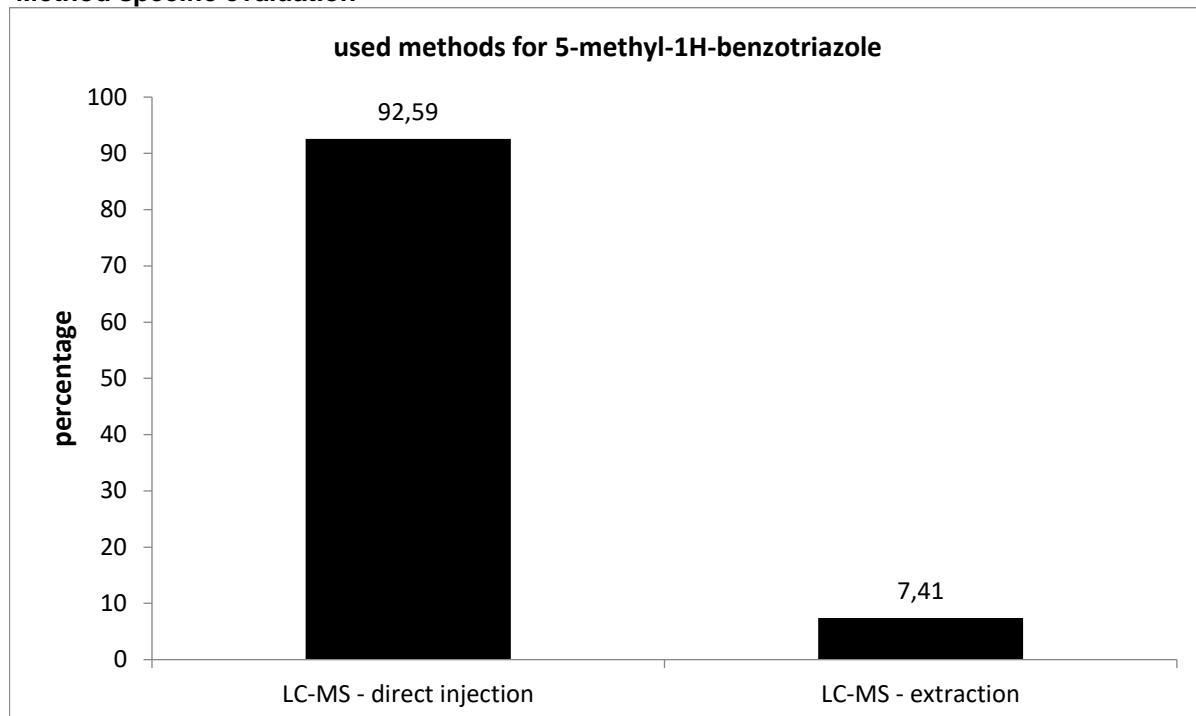

Slope of the regression: 0,962; average recovery: 96,2%

**Relative standard deviation and tolerance limits**

The relative standard deviations calculated with the Q-method did not reach the limits.

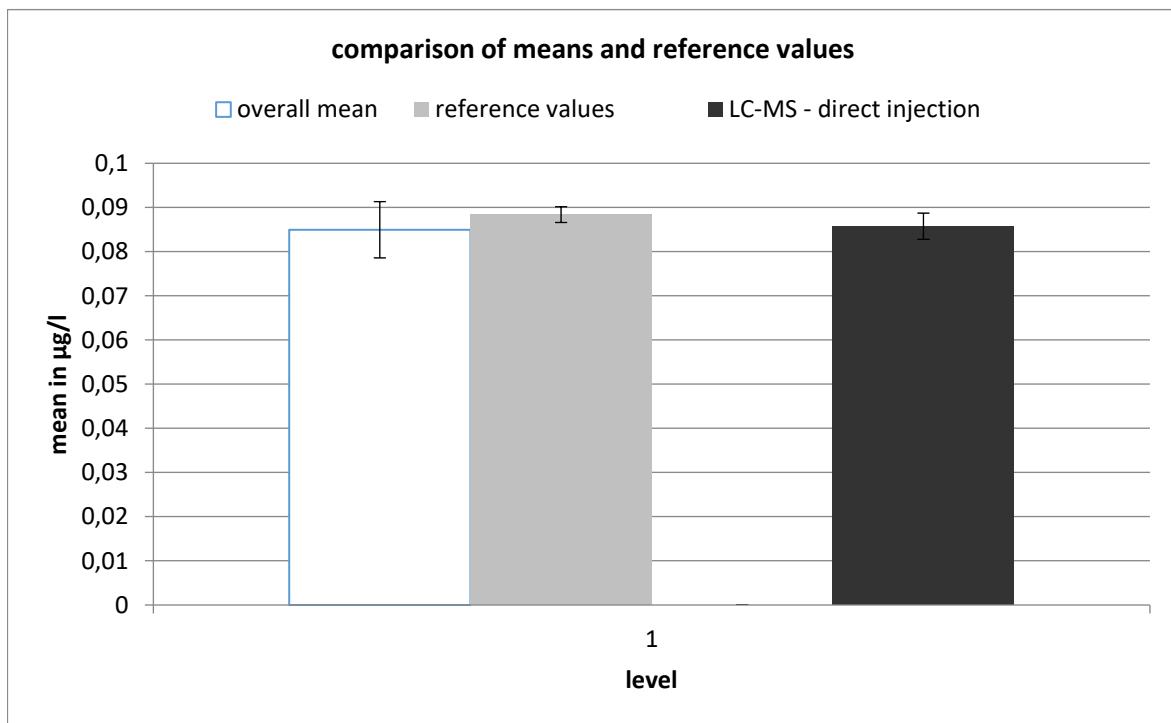

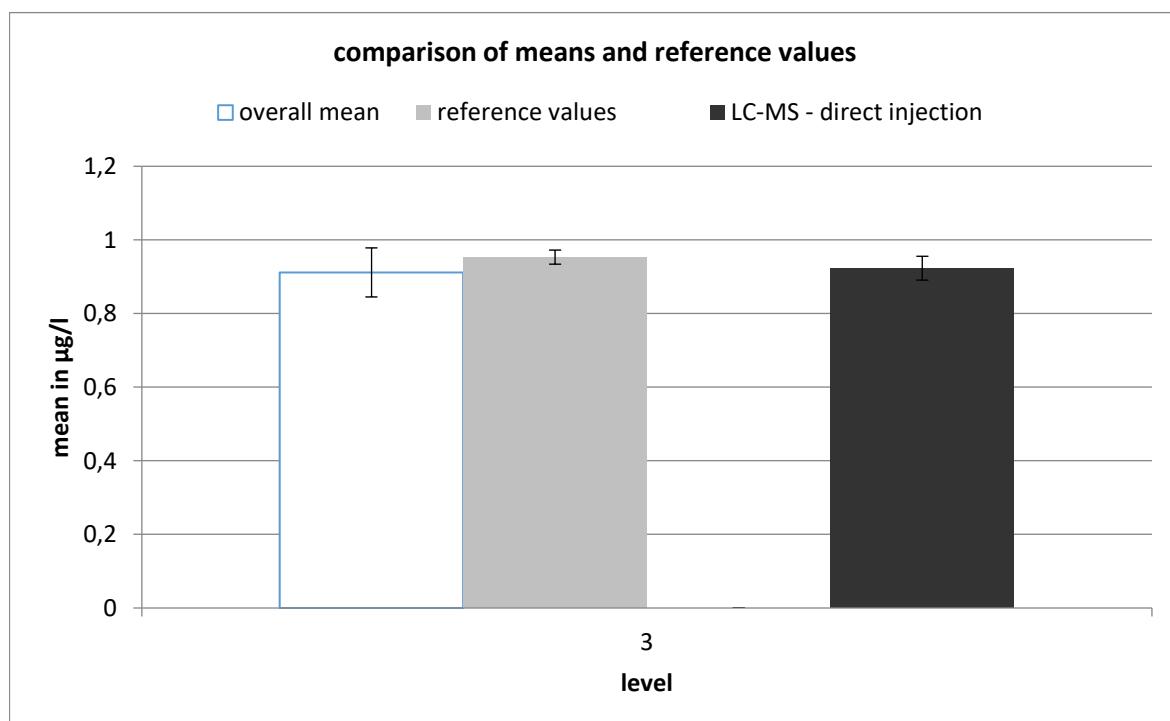

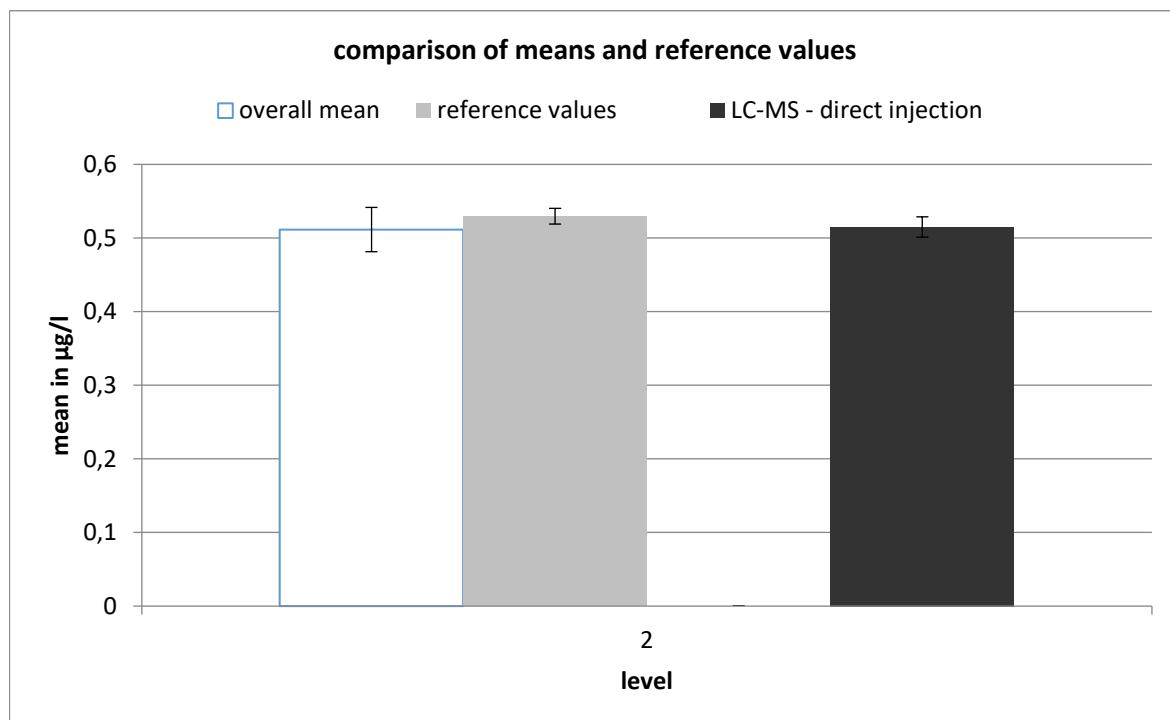

**Method specific evaluation**

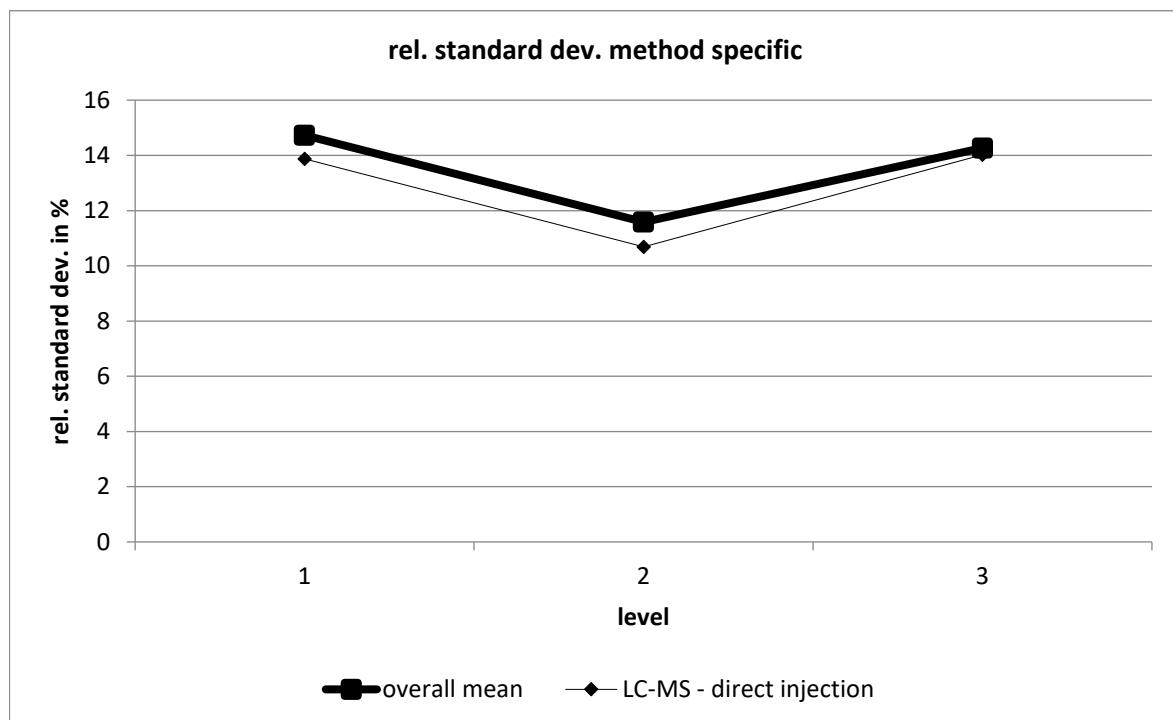

The values determined with LC-MS - direct injection showed the closest statistical distribution.

**Comparison of means and reference values**
